

NG KIM BOON — APRIL 2026 OVER-CLAIM

Provable padding only: Ng tap times vs Driver Soh tap times
No GPS-based accusations — only clock-card evidence

The rule used

Driver Soh runs the van. Ng cannot do real install work without the driver. So the only hours Ng can possibly have worked are the hours that fall INSIDE Soh's clock-in / clock-out window.
Anything Ng tapped BEFORE Soh started, or AFTER Soh finished, is padding. Pure clock-card evidence — no GPS interpretation needed, nothing he can argue against.

THE BOTTOM LINE

Ng claimed (his clock card):	238.20 hours
Driver Soh's window total:	264.96 hours
PROVABLE OVER-CLAIM:	3.69 hours
Real working hours (capped to driver):	234.51 hours

The 3.69 hours is the amount you can deduct from Ng's April pay with no argument from him — it's his own clock-in / out timestamps showing he tapped earlier in or later out than the driver.

DAY-BY-DAY COMPARISON

Each row shows Ng's clock vs Soh's clock. Red = Ng tapped padding (in earlier or out later than driver). Jobs column confirms work was actually scheduled that day.

Date	Ng tap	Soh tap	Ng hr	Soh hr	Real hr	Pad in	Pad out	Total pad	Jobs
04-02	07:00-21:51	06:20-21:50	14.8	15.5	14.8	0.00	0.02	0.02	G6+B0

APR TOTAL			238.2	265.0	234.5	3.63	0.06	3.69	

G = GGV jobs that day, B = Booking jobs. Pad in = Ng tapped in BEFORE Soh started. Pad out = Ng tapped out AFTER Soh ended.

THE PADDING DAYS, ONE BY ONE

2026-04-11 - 1.18h padding

Ng tapped IN at 07:38 but driver Soh only started at 08:49 -> 1.18h fake before driver arrived.

2026-04-28 - 0.55h padding

Ng tapped IN at 08:25 but driver Soh only started at 08:58 -> 0.55h fake before driver arrived.

2026-04-21 - 0.49h padding

Ng tapped IN at 08:30 but driver Soh only started at 08:59 -> 0.49h fake before driver arrived.

2026-04-22 - 0.35h padding

Ng tapped IN at 08:30 but driver Soh only started at 08:51 -> 0.35h fake before driver arrived.

2026-04-16 - 0.30h padding

Ng tapped IN at 08:33 but driver Soh only started at 08:52 -> 0.30h fake before driver arrived.

2026-04-17 - 0.21h padding

Ng tapped IN at 08:29 but driver Soh only started at 08:42 -> 0.21h fake before driver arrived.

2026-04-06 - 0.21h padding

Ng tapped IN at 06:13 but driver Soh only started at 06:26 -> 0.21h fake before driver arrived.

2026-04-08 - 0.15h padding

Ng tapped IN at 08:45 but driver Soh only started at 08:54 -> 0.15h fake before driver arrived.

2026-04-25 - 0.12h padding

Ng tapped IN at 08:42 but driver Soh only started at 08:47 -> 0.08h fake before driver arrived.

2026-04-29 - 0.11h padding

Ng tapped IN at 08:32 but driver Soh only started at 08:39 -> 0.11h fake before driver arrived.

WHAT TO DO

1. Show this report to Ng. The numbers are his own clock-in / clock-out timestamps next to the driver's. Nothing to argue.
2. Deduct 3.69 hours from his April pay. At his rate, calculate the dollar amount.
3. This is conservative — only counts time he tapped OUTSIDE the driver's window. Any "long lunch" or off-site behaviour DURING the driver's window is not punished here, even though it likely happened.

Going forward: the geofence + driver-anchored payroll change we discussed will block this kind of padding automatically every month, no manual investigation needed.
