

# NG KIM BOON — APRIL 2026 OVER-CLAIM REPORT

Real working hours measured against driver Soh Seng Kai  
GPS-disconnected time NOT counted as padding (benefit of doubt)

## How the numbers are calculated

The driver Soh runs the van TMG1 GGV-029 (the only van both staff use). Ng can only do real work while sitting next to Soh on jobs. So we use Soh's clock-in / clock-out as the truth window for Ng.

Two kinds of padding are counted:

- (1) Tap-window padding = Ng tapped IN before Soh started, OR tapped OUT after Soh ended. Pure clock manipulation.
- (2) GPS-confirmed off-shift = Ng's GPS shows him more than 2 km away from Soh for 30+ minutes WHILE Soh is at work. Phone clearly tracking, just not at the worksite.

When Ng's GPS simply stops broadcasting, we give benefit of doubt and assume he is with Soh. Not counted as padding.

## THE BOTTOM LINE

|                              |                                                           |
|------------------------------|-----------------------------------------------------------|
| Ng claimed (tapped clock):   | 238.20 hours                                              |
| Tap-in/out padding (vs Soh): | 3.69 hours (Ng punched earlier in / later out than Soh)   |
| GPS-confirmed off-shift:     | 18.25 hours (Ng was somewhere else while Soh was working) |
| <hr/>                        |                                                           |
| OVER-CLAIM TOTAL:            | 21.94 hours fake                                          |
| Real working hours:          | 216.26 hours                                              |

At Ng's monthly OT rate, 21.94 hours is the amount you should NOT have paid him this April. The rest of the report shows the day-by-day evidence.

# DAY-BY-DAY COMPARISON

Each row: Ng's tap times vs Soh's tap times, real overlap, padding, jobs done. "Real" = the slice of Ng's day when Soh was also clocked in (driver-based truth).

G = GGV jobs that day, B = Booking jobs that day. Red rows = day with >=1 hour of padding or off-shift, or no jobs done.

## EVIDENCE ON THE 5 BAD DAYS

These are the days where Ng's GPS proves he was somewhere other than the worksite while Soh was running jobs. Each one breaks down the jobs scheduled and what Ng was doing instead.

### 2026-04-11 - Off-shift 5.25h confirmed by GPS

Ng tap: 07:38 - 15:05 (7.45h claimed)

Soh tap: 08:49 - 17:04 (8.25h driver window)

Real hours Ng could possibly have worked: 6.27h, of which 5.25h GPS proves he was NOT with the van

#### Jobs on this day (driver did them, Ng was AWOL for some):

GGV 09:00-12:00 BLK 543 JURONG WEST ST 42 #08-53 [D+A]

### 2026-04-13 - Off-shift 3.42h confirmed by GPS

Ng tap: 06:51 - 19:51 (13.00h claimed)

Soh tap: 06:36 - 19:51 (13.24h driver window)

Real hours Ng could possibly have worked: 12.99h, of which 3.42h GPS proves he was NOT with the van

#### Jobs on this day (driver did them, Ng was AWOL for some):

## WHAT TO DO

1. Show Ng this report. Ask him to explain the 18.25 hours of GPS-confirmed off-shift time + 3.69 hours of tap padding.
2. Deduct 21.94 hours from his April pay (or recover if already paid). At his hourly rate this is the financial impact.
3. Going forward: the geofence + GPS-verified payroll change we discussed will catch this automatically every month, no manual investigation needed.

NOTE on Soh: This report only audits Ng. Soh's tap times are used as the truth ruler because his GPS is consistently with the van. Soh is not flagged for misconduct in April.

NOTE on GPS-disconnect days: Apr 8 (Ng GPS dies 14:56 then comes back at carpark 20:51) is NOT counted in the off-shift number above, per your instruction. If you later want to investigate disconnect-pattern abuse separately, we have the data.
