

TMG INSTALL — APRIL 2026 GPS ATTENDANCE AUDIT

Staff: Ng Kim Boon (User 2) and Soh Seng Kai (User 5, Driver)

Period: 1 Apr - 30 Apr 2026 | Generated: 2026-05-06

Method: GPS-verified hours = first time staff is >500m from clock-in spot, until last time >500m from clock-out spot. For driver, depot counts as work, so only end-padding subtracted.

1. SUMMARY

Staff	GPS Days	Tapped Hrs	Verified Hrs	Over-claim	Avg/Day
NG KIM BOON	17	212.96	161.46	51.50	3.03 h
SOH SENG KAI	18	238.57	218.39	20.18	1.12 h
TOTAL		451.53	379.85	71.68	

Combined April over-claim: ~72 hours of pay claimed but not GPS-verified. At OT rate this is roughly SGD \$1577-2294/month.

NOTES: Apr 1-5 has no GPS (tracking installed Apr 6). Sundays confirmed off. Apr 6 partial (first GPS day).

04-30	129	125	0	97%	1.9 km	together

5. NG GPS BLACKOUTS WHILE SOH WAS WORKING

These are time windows where Ng had no GPS data but Soh continued moving (>1km, >5 GPS points). Suggests Ng off-shift while Soh was on-job.

Day	Ng Lost	Ng Back	Duration	Soh Pts	Soh Moved	Flag
04-07	Tue 15:05	16:11	1.09 h	50	2.07 km	? check
04-08	Wed 14:56	20:51	5.91 h	414	20.95 km	! SOH WORKING
04-13	Mon 16:56	19:51	2.92 h	228	23.03 km	! SOH WORKING
04-14	Tue 20:57	23:38	2.69 h	91	6.52 km	! SOH WORKING
04-25	Sat 12:28	15:38	3.17 h	199	4.45 km	? check
04-28	Tue 10:37	11:52	1.26 h	77	1.53 km	? check

6. KEY INCIDENTS TO REVIEW WITH NG

04-08 Wed

Ng & Soh started together at car park 08:45. Worked Geylang job together until 14:00. At 14:56 Ng dropped off at Marsiling area. Ng GPS dark for 5h 55m. Meanwhile Soh continued: drove back to Geylang for Job #2 (15:36-17:02), then Bedok for Job #3 (18:05-20:06). Ng reappears at Woodlands car park at 20:51, exactly when Soh returned. Tapped out 21:51.

-> **Ng claimed 13.10h, actual ~7h. ~6h ghost time.**

04-13 Mon

Ng GPS dies at 16:56 in middle of shift. Soh continues for 2h 55m, moves 23km, doing more jobs. Ng reappears at depot 19:51 to tap out.

-> **Ng claimed 13h, ~3h likely off-shift.**

04-14 Tue

Ng GPS dies at 20:57. Soh works another 2h 41m, moves 6.5km. Ng tapped out 23:39.

-> **Ng claimed 14.64h, ~2.5h likely off-shift.**

04-25 Sat

Ng GPS dies 12:28-15:38 (3h 10m). Soh moved 4.5km during gap doing other work.

-> **Mid-day gap of ~3h needs explanation.**

04-11 Sat

Ng and Soh were NEVER together this day (max 29.5km apart, 0/59 bins together). Different jobs or one was off-shift?

-> **Verify: were they on separate jobs that day, or one was not actually working?**

04-24 Fri

Ng at single Hougang site all day (legit single-site job). Soh did different jobs (87% of time apart, max 10.2km). Confirms Ng worked alone that day.

-> **Legitimate, but verify both were assigned that day.**

04-27 Mon

Same as 04-24. Ng at single Hougang site all day, Soh elsewhere (100% apart).

-> **Legitimate single-site job. Verify assignment.**

7. METHOD & CAVEATS

Data source: gps_track_points (continuous staff GPS history) + attendance_logs (tap-in/out records).

Verified Hours rule (Ng): first time GPS shows >500m from clock-in spot -> last time GPS shows >500m from clock-out spot. Anything sitting at depot/home/car park does not count.

Verified Hours rule (Soh, driver): clock-in time -> last time GPS shows >500m from clock-out spot. Driver depot is work zone (loading van), so start padding is not subtracted.

Single-site job correction: when staff stays within 500m of clock-out spot all shift (no first_move/last_move detected) AND has >50 GPS points, this is treated as a legitimate single-site job and tap_hrs is used as verified.

Caveats: 500m radius is generous (covers car park + adjacent shops). Apr 1-5 missing because GPS tracking was installed Apr 6. Apr 6 is first GPS day, partial data. GPS gaps may be due to phone off, battery dead, or signal loss - context (Soh activity) helps disambiguate.

Legend: [!] REVIEW = >3h padding or anomaly. [?] minor = 1.5-3h padding. ok = <1.5h normal padding (start/end of day).
